

Lightning Detection Systems

EWS-PRO

EWS-PRO is the only professional-grade portable lightning detection and early warning device available today.

In a rugged self-contained case, it has the electronic sophistication to detect lightning over 40 miles away, and to accurately track a storm's approach and departure with both its large LED visual alerts and its audible horn.

Its LED alerts cover four ranges, 0-3 miles/3-8 miles/8-20 miles/20-40 miles,

providing vital information when a storm is moving towards, away from or parallel to your location.

Its audible horn is set by the user to any strike range to make a storm easier to monitor.

Not only does **EWS-PRO** allow for an informed decision as to when to evacuate the area, it also informs you when it is safe in the area to resume operations or outdoor activities again.

EWS-PRO FEATURES

- > Accurate digital microprocessor with patented dual antenna receiving system.
- > Built-in 12-volt rechargeable power source that operates 7+ days on a single charge.
- > 95-db alert horn, with user-adjusted range setting.
- > Rugged weather-resistant case.
- > Low battery indicator.
- > Severe thunderstorm alert LED light.
- > False signal filtering to identify interference.
- > Identification software to filter out harmless cloud-to-cloud lightning activity.

EWS-PRO APPLICATIONS

- > Construction sites
- > Mining/drilling sites
- > Golf course work crews
- > Airport/airline ground crews
- > Outdoor events - concerts, regattas
- > Military training sites
- > Outdoor park/recreation programs
- > Educational training facilities
- > Theme parks
